
EDUCATION

Stanford University

Stanford, California

B.S. Data Science | Concentration in Economics | GPA: 3.9/4.0 | 1570 SAT

Class of 2028

- Coursework: Probability & Statistics, Advanced Programming, Economic Analysis, Decision Modeling

PRODUCT & TECH EXPERIENCE

Pareto Agent

Stanford, California

Product Management | \$3.5M funded startup automating B2B renewals | Employee #6

June 2026 - September 2026

- Ran discovery across 15+ customer calls; identified admin loss as client's worst pain point, which drove our first feature
- Owned: 1) an agentic loop to locate a responsive champion; 2) a prototyped customer-facing dashboard with telemetry
- Shipped to design partner LeanData; iterated on their feedback to reorient our design to be people-centric
- Operated as PM, designer, and engineer; utilized AI coding agents; demoed 15+ times to VCs and design partners

Stanford Football

Stanford, California

Player Valuation Tool for NIL Spending — built to the Assistant General Manager's PRD

April 2026 - present

- Coded the specified tool to ingest profiles; output ROI estimate on a proposed NIL offer; trained on 45k+ recruit profiles
- Redefined circular outcome labels from real thresholds & exposed a significant risk rate spread across eligibility years
- Revised the tool that labeled 3 first-round QBs as busts; expanded scope to not assume full retention in transfer portal era

Redpoint Ventures

San Francisco, California

Venture Capital Summer Analyst

June 2025 - July 2025

- Analyzed 150+ defense tech startups across AI, autonomy, and robotics to evaluate market positioning and identify trends
- Sat in on founder pitches and calls, which redirected me to an early-stage company rather than evaluating from the outside

SELECT INDEPENDENT PROJECTS

Chapter HQ

Internal chapter operations platform for Stanford fraternity

- Built a dashboard for a 105-member org for dues, house points, events, and files using Supabase; Stripe integration
- Rescoped the project after chapter president's direction that member-facing product adoption would be too difficult
- Cut the platform down to single-purpose admin tools; chapter exec adopted; points & dues modules in use today

Revenue vs. Compensation Machine Learning Project

Modeling Caitlin Clark's uncompensated revenue generation

- Tuned ML models & estimated \$30M+ in revenue, 8k+ extra fans per game accrued to the team rather than the player
- Scraped 4 seasons of data; applied difference in difference framework to isolate player impact from league-wide growth

Self-Directed Product Work

- Automated the work of a property manager via a tool to sync Airbnb bookings with resort booking software
- Developed a configurable platform to model renewal pricing predictors; data cleaning pipeline and user interface
- Created an NFL prospect outcome classifier using draft-day data; 25%+ lift over base; precursor to Stanford Football tool

ADDITIONAL EXPERIENCE, SKILLS AND INTERESTS

Awards — Winner at SABR's Diamond Dollars Case Competition; only high school team selected; MLB front-office judges

Technical — Python, C++, pandas, machine learning + scikit-learn, Excel, Supabase, Render

Built with AI coding agents — TypeScript, SQL

Interests — Captain, Stanford Club Baseball | Executive Board, Phi Psi Fraternity | VP Recruitment, Interfraternity Council
